About me:

Stripped away Myspace layout and started coding weird and wonderful profiles

- More friend requests
- Messages saying awesome profile
- Attracting an audience I wanted to attract
- Took that with me over the years - seen it time and time again - Those with personality attract attention, the RIGHT attention.

Most websites I see are \$#!t

- Clunky / don't work very well
- Still not mobile friendly or secure
- Boring / Do not communicate effectively with audience

When that happens you don't get leads and sales - Business fails.

I am on a mission to change that!

What's yours?

Thinking about the foundations of your business will help you communicate more clearly with your audience because everything you believe in, everything you do will define everything you say.

Why did you start your business?

What are you trying to achieve?

Who are you aiming to work with?

Do they believe in what you believe?

You've got to understand your biz and your customers otherwise how are you going to target them?

1. Page with purpose

Think about what the page is.

What you want people to do?

Each page should have a specific purpose

Sit down and map out each page individually
